CHOSEN BY
BOSTON'S FINEST
ARCHITECTS,
BUILDERS AND
DESIGNERS

For Home Entertainment & Integrated Electronics
that Blend Seamlessly with Décor.

It's not just the equipment.

It's reliability.
That's how we built our reputation.

It's experience.
We have been designing and installing
custom electronics for 35 years.

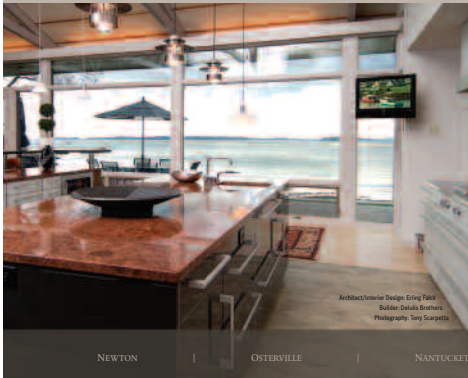

It's resources.

We have a team of more than 50 professionals, including installers, engineers, programmers, project managers and licensed techs. Each one of them shares the Audio Video Design commitment to exceeding the expectations of architects, builders and designers — and most importantly, their clients.

Blue is the New Green

We have the industry's highest performing solutions that outperform the competition in power and space requirements.

Powerful, yet Green, agami Systems' adaptive storage solutions power your business 24/7 with the industry's fastest and most comprehensive business continuity solutions for physical and virtual computing environments. Based on order of magnitude performance advantage over competitive solutions, we also offer very high efficiencies in terms of power and density, apply Information Servers (IS) deliver advanced features including Blue File System Replicas for archiving and to ensure continuous information access, agami Systems is an ideal business continuity at the lowest cost per terabyte available.

Learn more about Enterprise Data Protection by reading the agami.com/whitepaper. Or call 1-877-3-AGAMI.

"A discovery is said to be an accident meeting a prepared mind."

ALBERT EINSTEIN

Be Prepared with Hi-Def Preparation

Introducing the acoustic-powered L-series instruments from Covaris

The ability to ensure soluble compounds in HTS assays are in solution is now here. The L-Series instruments from Covaris utilize a new non-contact acoustical technology that takes active control of your off-the-shelf microplates. Processes that once took 10 minutes to run using high-throughput fluidation, mixing, solution, declumping and dissolution now complete far more efficiently in 20 seconds or less.

The L-series instruments from Covaris are particularly effective in diffusion-limited assays. By making your microplates HD ready you will at last realize the full potential of your lab's discovery process.

The L-Series is powered by the Covaris Adaptive Focused Acoustic (AFA) technology. AFA, a proprietary computer controlled, focused acoustic process based on shock wave physics, delivers controlled, precise and accurate energy to a fluidic sample for unsurpassed mixing—every time.

How Big a Problem is Microplate Mixing?

Discovery Areas with the Greatest Need for Improved Microplate Mixing

Benefits include:

- Non-contact, isothermal processing
- Rapid transfer of non-ionizing energy
- Reduced false negatives with uniform salvation
- Improved assay performance, particularly in High-Density Plates
